## About

Frontend & Mobile Software Engineer with 5+ years of experience building scalable, high-performance apps for global companies. Specialized in React, React Native, and modern frontend architectures (Next.js, micro-frontends). Proven record of improving app performance by up to 35%, delivering mission-critical features, and mentoring teams to accelerate productivity.

Seeking to contribute as a Senior Software Engineer by driving impactful solutions and scaling engineering practices..

## Skills

- **Frontend**: Javascript | Typescript | React | React Native | CSS | Git | Node Sass | Styled Components | NextJS | Redux | Hooks
- **Mobile:** React Native | Expo
- **Testing:** Jest | Cucumber | Unit Testing | React testing library
- **Practices:** Micro-Frontends |OOP | Scrum | Code Review | Git | CI/CD
- **Cloud/Tools:** Azure | AWS

## Experience

**Mobile Developer** — **QAT Global** — *Uberaba, Brazil* — **07/2023 - Actually**

- Developed and implemented software solutions aligned with business requirements, troubleshooting issues, optimizing code performance, and enhancing overall system functionality using **React Native**, **React Hooks**, **Redux**, **Redux Thunk**, **Expo** and **Jest**.
- Ensured code security and reliability by writing tests and following best practices, making it maintainable and resilient to future refactors or changes.
- Refactored and restructured the code to improve **20%** performance when the app gets a big amount of data maintaining good function of the software.
- Improved app performance by **35%** through a large-scale refactor, removing redundant Redux logic and optimizing state management.
- Resolved **15+ critical production bugs** in **2 day**s as the sole developer, restoring essential client operations.
- Reviewed and corrected code from coworkers to ensure consistency with architectural patterns and maintain overall code quality.

**Software Development Engineer** — **Supero** — *Curitiba, Brazil* — **10/2021 - 01/2024**

Contributed to 4 enterprise projects, where I introduced testing practices, optimized micro-frontend architectures, implemented real-time features, and led delivery of a React Native application, driving measurable improvements in performance and team productivity.

**Engie - Power Transmission**

- Introduced automated testing (Jest, React Testing Library, Cucumber), establishing **TDD → BDD** practices in a project with no prior tests, improving reliability and reducing future bugs.

**Engie – PV**

- Delivered a fully tested MVP ahead of schedule using React, Material UI, and shared style patterns in a micro-frontend architecture.
- Fixed critical webpack configuration issues preventing local builds, **unblocking the development team**.

**Digitro**

- Developed new data-driven dashboards with Material UI and tables, improving **data readability by 30%**.
- Implemented **real-time WebSocket features**, increasing system responsiveness for client operations.

**Nestlé (Flag)**

- **Led design and delivery** of a React Native app from scratch, making architectural decisions including library and tool selection.
- Built **offline-first features** to prevent data loss, reducing rework by **90%**.
- Streamlined testing pipeline by automating builds and versioning, improving test efficiency by **20%**.

**Software Engineer** — **Elev*** — *Recife, Brazil* — **09/2020 - 10/2021**

- Designed and implemented a health tech application that delivers food based on user preferences and allergies, using React Native for the client app and React for the vendor platform, ensuring a seamless and personalized experience.
- Released and maintained the MVP on the **Play Store**, ensuring timely updates and stability.
- Collaborated with the team to make key strategic decisions shaping the direction of the startup, ensuring alignment with business goals and technological growth.
- Mentored and guided an intern to adopt project design patterns and best coding practices, reducing code review corrections by **20%** and improving delivery speed of assigned tasks.
- Resolved critical production issues within 5 hours, preventing downtime and ensuring 100% application availability for active users.

## Education

**Bachelor of Information Systems** — **Universidade Federal de Pernambuco** — *Recife, PE, Brazil* — **03/2019 - 04/2025**

- Major in Information Systems
